24 May 2022 20:08

Q :- $[1, 2, 5, 4, 3]$

Ans $[1, 2, 3, 4, 5]$

reverse any
subarray then
can you able to
sort array?

$\hookrightarrow [1, 3, 4, 10, 9, 8]$

$[1, 3, 4, 8, 9, 10]$

$\hookrightarrow [1, 2, 3, 4, 20, 9, 8]$

$[1, 2, 3, 4, 8, 9, 20]$

Ans $[1, 2, 3, 4, 20, 9, 10] =$

$[1, 2, 3, 4, 9, 10, 20]$

Q $[1, 2, 5, 4, 3]$

5 mins :-

Ans $[1, 2, 3, 4, 5]$

8:26

$[8, 3]$

Q $[1, 2, 5, 4, 3]$

In \uparrow

$j = \text{len}$

Sort

$[2, 3, 2]$

(1) Up to which point move

is incrementing values.
 (2) upto which point array
 is decrementing values

[1, 2, 5, 4, 3]
 for (i = 1; i < len; i++)

if (arr[i] > arr[i-1])

if (i == len) x

i = 3

1 → index

2 > 1

this sparse or not?

Q

[1, 0, 0, 1, 1, 0]
 2 pointers make 0 → left

3

1 \rightarrow right

3 pointers $[2, 0, 1, 0, 0, 1, 2]$ Sort
 $0 \leftarrow (1) \rightarrow 2$

Q. If $[3, -2, 5, -4, 1, 6]$ $\leftarrow (0) \rightarrow$
 $\downarrow \quad \downarrow \quad \downarrow$
 $\times [-2, -4, 3, 5, 1, 6]$ Partial
 $\boxed{-ve \leftarrow \quad \rightarrow +ve}$ Pivot $\Rightarrow 0$
Approach 7 mins Partition algo g.o

arr = $[3, -2, 5, -4, 1, 6]$ $[i=0, j=1, \text{pivot}=0]$

Step 1:-

① arr[0] $\Rightarrow 3$

$3 < 0 \Rightarrow \text{no/false} \Rightarrow \text{jth}$

② arr[1] $\Rightarrow -2$

$-2 < 0 \Rightarrow \text{yes} \Rightarrow \text{ith} \Rightarrow i=0$

now, a[i], a[j] \Rightarrow Swap $\Rightarrow \text{jth}$

$[-2, 3, 5, -4, 1, 6]$

$i=1, j=0$

$$arr[5] \Rightarrow 5$$

$$5 < \underline{0} \Rightarrow \text{j++}$$

$$j = 3, i = 1$$

$$arr[4] \Rightarrow -4 < 0 \text{ } \{ \text{true} \} \text{ i++}$$

swap $arr[i], arr[j]$ & $j++$

$[-2, -4, 5, 3, 1, 6]$

$$1 < 0 \text{ } \{ \text{j++} \}$$

pivot 6

$$i = -1, j = 0$$

$$6 < 0 \text{ } \{ \text{j++} \}$$

1. $arr[j] < \text{pivot}$ $\{ \text{i++} \}$

swap $arr[i], arr[j]$ & $j++$

2. $arr[j] > \text{pivot}$ $\{ \text{j++} \}$

inp $\Rightarrow [1, 2, 3, 4] \Rightarrow$ cycle rotation

3 mins

ADVANCED IS (1)

(2)

(3)

① Pass by Value & Pass by Refer

In Javascript, all function arguments

Pass by value:

copy the value of the variables in
the function arguments.

$y = 10;$

$\text{square}(y)$

square(10)

```
function square(x){
  x=x*x;
  return x;
}

let y = 10;

let result = square(y);
console.log(result);
console.log(y);
```

let ~~y~~ = 10 // 00AB
 y = 100 // 00AB
 console.log(y) (100)

square(~~y~~) // Pass by value
 square(10)

e.g. square(x)

↳ let y = 10;

square(y)

fn square(x)
 {
 ==
 ==
 }

square(x)

```
{
  x = x*x; // 100
  return x;
}
```

↓

→ x =

$x = 10$
result = square(x) // 100
 result

Pass by value as a concept is not supported by all datatype in JS.

Supported

1. Number	} <u>Primitive</u>
2. String	
3. Boolean	

Pass by reference

```
let person = {
  name: 'Dipanshu',
  age: 21
```

```
}
function increaseAge (obj)
```

```
{
  obj.age += 1;
```

```
}
obj = { name: 'Pr
```

```
}
increaseAge (person)
x = 10
```

.l

⇒

let person = {

name: 'Dipang'

age: 21

}

```
let {
  name
  age
}
```

```
function
  obj
  r
  }
  obj
  cor
}
```

```
incre
consc
```
